

Corona Virus Script

Today we are experiencing a global pandemic known as the coronavirus which is affecting our condition of life at every level ([Have Chinese Virus Video](#)). We have created a solution to assist with the growing demand of coronavirus testing ([Testing For Corona Virus Video](#)), lab diagnostics ([Lab Tech Placing Video](#)), and required resources to battle this global pandemic. ([Dr. Or Scientist Protects Video](#))

EcoHealth ([EcoHealth Logo Here](#)) has created a strong alliance with our partner's nexus laboratories ([Nexus Laboratories Logo Here](#)) and DripFusion ([DripFusion Logo Here](#)) to deliver a protocol ([Word PROTOCOL jumps out](#)) to ensure that our communities ([Pic Of Community Here](#)) are prepared to effectively contain and prevent further spread of the coronavirus.

Our protocol includes providing prescreening of potential infected coronavirus patients using telehealth. ([Put the word Telehealth up and create a scene where a person is talking with a Dr. via computer or phone just like in the faith based video. Of course use different avatars. Before we show the avatar speaking with the doctor, lets show a pic of a laptop and cell phone.](#)) Telehealth involves a virtual visit with a physician using a mobile device or smart phone which enables physicians to determine the medical necessity and the probability of if a patient is in fact infected with Coronavirus. This is done through a prescreening process in which the physician assesses the patient's symptoms. ([As she is talking to the doctor, have my avatar standing to side explaining whats going on](#))

If the patient displays key symptoms ([Put Picture of Symptoms here or picture of thermometer. All pics are in a folder within dropbox within the corona project](#)) indicating a potential infection of coronavirus, then the patient is scheduled for an on-site test at one of our EcoHealth mobile laboratories and testing sites within their local community. ([This is where you would have to create a EcoTech Pro-IV Health Pod and add logos to it. I sent example pictures of an actual pod](#))

Our mobile testing site enables us to efficiently test the patient as well as provide a diagnostic reading of the test results on site. ([Set up clinic scene where patient is getting tested that cuts to a scene where lab techs are doing diagnostic test](#)) This decreases the time delay in providing results to the patient, ([Have Video of Delay clock or impatient person waiting](#)) in addition to decreasing the potential spread of the virus while collecting vital data.

EcoHealth is prepared to assist in all communities ([Use Beautiful aerial drone Video](#)) with our coronavirus prevention and reduction framework. Our mission, is to encourage community leaders ([Young African American Men Doctors Video](#)), government official ([PAN of serious businessman Video](#)), municipalities ([Worship Raised Video](#)), heads of state, ([Put Members of group video](#)) and federal governing bodies ([Businessmen Signing Video](#)) to engage us in initiating this revolutionary and much needed protocol.

By working together, we will save lives and effectively battle this current pandemic known as coronavirus. One can participate by following 3 simple steps:

(As with the faith based video, have me standing on side of whiteboard with the words coming on the whiteboard)

Step 1. Download our Pro-IV app by visiting ProIVClinics.com. This can be done on your desktop computer, tablet or smartphone device. Once the app is downloaded, you can enroll in our Telehealth services and be screened through a virtual visit with a physician right inside the app.

Step 2. Should you need further evaluation, you will be directed to one of our Eco-Tech Pro-IV Health Pod Sites.

Step 3. Should you happen to test positive for the Coronavirus, you could be invited to be our guest at one of our Eco-Tech Pro-IV Revitalization Communities. (Create community scene outside in nature with various EcoHealth Pro-IV pods with various medical staff assisting them. Show them happy. It will be similar to the outside scene you created within the Faith Based video)
